

Simply beautiful. Inspired living.

July 20, 2020

Dear Pennswood Village Community:

We share with you today that Pennswood Village received notification that it has a new staff person that has tested positive for COVID-19. This person, during their time at Pennswood, wore Personal Protective Equipment (PPE). We understand that the individual that tested positive is showing no symptoms and feels fine. As we find that many of these mass tests sometimes provide false positives, we are asking this individual to consider being retested to confirm their first test.

You should not worry if you were or were not exposed by this latest staff person, because if you were, a Pennswood Village staff member would have contacted you directly about your exposure risk. So if no one contacted you directly, you should not be concerned about exposure here at Pennswood.

We all must continue to be proactive and monitor our health and inform your department manager (staff) or Resident Health (residents) of any illness/symptoms, not only yourself but also your household members. Should you have any questions, please do not hesitate to contact me directly at murray@pennswood.org.

Sincerely,

Daniel J. Murray
Chief Executive Officer
